

ANEEQ KHATRI

AI Engineer | Agentic AI, Multi-Agent & LLM Systems

+92 (336) 111-5782 · aneeqabdulsamad5761@gmail.com · linkedin.com/in/aneeq-khatr

Karachi, Pakistan · Open to fully remote roles worldwide

SUMMARY

AI Engineer with five years of industry experience, specializing in agentic AI: designing, building, evaluating, and operating production multi-agent systems. I architect agent workflows in Python with LangChain, LangGraph, the OpenAI Agents SDK, and MCP, covering tool calling, retrieval, orchestration, context engineering, and structured outputs, and I back every system with evaluation pipelines, guardrails, human-in-the-loop controls, and observability so behaviour is measured rather than assumed. I own features from prototype through deployment and iteration, and a full-stack TypeScript, React, and Node.js background lets me carry an AI feature through the backend and into the product. I also train engineers at national scale, so explaining complex AI systems to technical and non-technical audiences is routine.

TECHNICAL SKILLS

AI System Design: Tool calling and function calling, agent orchestration, multi-agent systems, context engineering and management, structured outputs, agent memory, guardrails, human-in-the-loop controls, prompt and workflow patterns

Agent & LLM Frameworks: LangChain, LangGraph, CrewAI, OpenAI Agents SDK, MCP (Model Context Protocol), OpenAI API, AWS Bedrock (hosted foundation models including Anthropic Claude), n8n

Retrieval: RAG architectures, embeddings, semantic and vector search, chunking and indexing strategies, pgvector, Pinecone, Qdrant, Chroma

Evaluation & Observability: Evaluation pipelines for output quality, agent behaviour, latency, and cost; LLM-as-judge, automated evaluators, eval dataset curation, regression tracking; tracing, logging, and debugging with LangSmith and Langfuse

Security & Governance: Authentication and authorization, RBAC, secrets management, audit logging, secure tool execution, guardrails and policy enforcement, data handling and privacy controls

Languages & Backend: Python, TypeScript, JavaScript, FastAPI, Django, Node.js, NestJS, Express, RESTful APIs, GraphQL, microservices, SQL

Data & Infrastructure: PostgreSQL, MongoDB, Kafka, Docker, AWS (Bedrock), GCP, Azure AI, CI/CD with GitHub Actions, Git-based development, test-driven development, performance tuning for latency, cost, and scale

Frontend: React, Next.js, Tailwind CSS

EXPERIENCE

AI Engineer | Voya AI

Dec 2025 – Present

Full-time · Remote (Sarasota, Florida, USA)

- Design, build, and operate production multi-agent systems in Python with LangChain and LangGraph, covering tool calling, retrieval, orchestration, context management, and structured outputs
- Architect multi-agent systems of 5–6 specialized agents that coordinate, share context, and delegate end-to-end tasks, cutting manual intervention on operational workflows by ~30%
- Build integrations between agents and enterprise systems: external APIs, databases, third-party services, and vector stores, sustaining 80%+ tool-selection accuracy in production
- Implement evaluation pipelines measuring output quality, agent behaviour, and regressions, with curated eval datasets, automated evaluators, and LLM-as-judge scoring gating every prompt and model change
- Build observability, tracing, and debugging for AI systems in development and production using LangSmith and Langfuse, diagnosing failures across prompts, model behaviour, and external integrations
- Apply secure engineering practices to agent systems: authentication and authorization, RBAC, secrets management, audit logging, and secure tool execution, with guardrails and human-in-the-loop controls on actions that carry real-world consequences
- Reason about reliability, latency, and cost as first-class constraints, profiling and tuning agent workflows and managing tradeoffs across model providers
- Prototype rapidly, validate with evidence rather than assumption, and harden what works into maintainable production systems shipped via Docker and GitHub Actions CI/CD to AWS
- Convert ambiguous business problems into practical AI solutions with product, design, and engineering stakeholders

Agentic AI Engineer & Trainer | PIAIC

Aug 2025 – Present

Presidential Initiative for AI and Computing · Part-time (weekends) · Hybrid

- Engineer AI-native products, including an accounting platform and e-commerce systems, using the OpenAI Agents SDK, CrewAI, and MCP for custom, scalable agent development, applying spec-driven and test-driven development to keep agentic systems predictable
- Build RAG pipelines over document and structured data using embeddings and vector databases for retrieval-grounded analysis and content generation
- Ship reference implementations adopted across national program projects, and mentor engineers in agent development and evaluation practice

Full-Stack Developer (AI Focused) | Celeritas Digital

Sep 2024 – Jul 2025

Full-time · Hybrid · Karachi, Pakistan

- Integrated AI-powered features into existing products, strengthening core functionality and driving a ~15% improvement in user engagement
- Proposed and prototyped new generative-AI capabilities, several of which were adopted into the product roadmap
- Shipped on schedule in a fast-moving product team, working across frontend and backend alongside product, design, and QA

Software Engineer | Avialdo Solutions

Jun 2023 – Sep 2024

Full-time · Hybrid · Karachi, Pakistan

- Owned delivery of critical features end-to-end, from technical design through deployment, improving team velocity and response times
- Mentored junior developers through code review and pair programming, set code-quality standards, and covered team-lead responsibilities when needed

MERN Stack Developer | SoftApps LLC

Dec 2022 – Jun 2023

Full-time · Onsite · Karachi, Pakistan

- Built web and cross-platform applications with React, React Native, Node.js, Express, and MongoDB, delivering features from concept to production
- Designed and optimized RESTful APIs and event-driven services with Kafka for performance and scalability as user traffic grew

Web Developer Intern | RIKSOF

Sep 2022 – Nov 2022

Full-time · Onsite · Karachi, Pakistan

- Contributed to client projects in a collaborative team, working hands-on with real production codebases

AI EDUCATION (CONCURRENT, PART-TIME)

Head of Faculty & Lead Trainer | GIAIC

Feb 2024 – Present

Governor Sindh Initiative for AI and Computing

- Lead a faculty of ~100 instructors and have trained thousands of engineers in agentic AI through Pakistan's national AI programs, explaining complex AI systems to technical and non-technical audiences and owning academic quality assurance across cohorts

Lead AI Trainer | Saylani Mass IT Training (SMIT)

Aug 2026 – Present

- Design and deliver hands-on agentic AI training covering multi-agent architectures, tool-calling, and agent evaluation, bringing production practices from my engineering work into the classroom

EDUCATION & CERTIFICATIONS

BS Computer Science | Virtual University of Pakistan

Apr 2023 – Dec 2026 (expected)

Certified Cloud Applied Agentic AI Engineer | PIAIC

Oct 2022 – Sep 2024

Coursework: Agentic AI, Generative AI, LLMs, microservices, test-driven development, event-driven architecture

AWS Developer Associate (training program) | SMIT

Aug 2024 – Jan 2025

MERN Stack Development | Jawan Pakistan

Apr 2022 – Jan 2023
